

## PUI Assignment 6A - Low-fi Prototype

Shopping Cart - new lofi design

Design: For this low-fi prototype of the shopping cart, I sketched out all of the information that I would want to be displayed on this page. Like a traditional shopping cart, the items are arranged in a list receipt format which would grow vertically when items are added. For each item, I included the price, quantity, flavor, and glazing. In order to keep the page uncluttered, I also included an edit button which would potentially bring a pop-up allowing the user to change order details such as quantity and glazing. The continue shopping button returns the user to the menu, and the checkout button would take the user to another page in the checkout process. To fill up additional space, I also added an image on the right hand side.
